MAJOR GENERAL JAMES E. BRIGGS

Superintendent

As I write these words in 1958 as a salute to the Class of 1959, a dream belonging to all of us is being fulfilled. Not only are we moving into our permanent buildings, but the Cadet Wing is growing—and I sincerely believe growing robustly and healthfully.

The Class of 1959 has, of course, been the pioneer. We who have the responsibility for the administration of the Academy have probably made mistakes. Using the Class of 1959 as a criterion to judge our effort, these mistakes must have been minor. Having pioneered together, let us leave to the future the assessment of our past decisions. If you, the Class of 1959, meet the challenge, we have been successful.

God speed.

JAMES E. BRIGGS
Major General, USAF
Superintendent

Officers front and center . . .

6

We introduced the whites.

While the taxpayers looked over their investment . . .

we pondered our future.

Where else can
you be a social
lion on thirty
bucks a month?

We continued
to win our
share . . .

Competition was always keen.

Varsity or
intramural—
we played
to win.

A year ago it seemed

a long way off.

Our dream nears reality.

The academic complex—for many a grim reality.

Our spiritual needs were satisfied . . .

As was our desire to view Europe's present and past.

This magic carpet made

the world our classroom.

DWIGHT D. EISENHOWER

The Commander in Chief

The Honorable James H. Douglas

Secretary of the Air Force

General Nathan F. Twining

Chairman, Joint Chiefs of Staff

GENERAL THOMAS D. WHITE
Chief of Staff
U.S. Air Force

BRIG. GEN. ROBERT M. STILLMAN
Commandant of Cadets

Summer Trips

Who
went

What
to
see

Where
to
go

What
to
do

The Queen

Good show

Social Life

It took lots of work . . .

by lots of people.

"There I was, on my

To make these dances so successful

back at 40,000.

"Watch that toe, son!"

"Confucianism has its points, but."

"May we take a ride?"

"Let's take that one."

110

"Yes, I am a fighter pilot."

"This is an airplane."

"Around the park . . ."

"But who'd dance with me?"

"I would."

"Okeh, A-Hall at eight."

Sometimes captions . . .

Just aren't necessary . . .

But when needed, words and . . .

Music made our social world go round.

"We met some

"Listened to
"Even made some

Interesting people . . ."

excellent music . . ."
of our own . . ."

"...7 ...6 ...5 ...4 ...3 ...2 ...1 ...Pfttt!
"And often thought of the future."

The untimely death of Cadet Richard D. Davis came as a sobering shock to all of us here in the cadet wing. We all humbly join the family and relatives of Cadet Davis in this moment of sorrow . . .

With the publication of FINAL APPROACH, 1957-1958 passes from reality into pictures and pages of memories and history. It was a year of new experience, of new adventure—a year of molding tradition in a very young but vigorous Academy. FINAL APPROACH stands as a symbol of these attributes and the Staff hopes that the story is told properly and adequately. FINAL APPROACH also stands as a stepping stone to the 1959 yearbook, the fourth and final book of this first series, the book which we hope will bear the permanent and symbolic name.

In completing this volume we owe our heartfelt thanks to numerous persons. First, to Mr. John Burn and the John Burn Agency for his excellent photographic contributions during the Class of 1959's trip to Europe, which appear on pages 31 through 51. Next, to Master Sergeant Anderson and Technical Sergeant Hunter for their loyalty and devotion in supplying the Academy yearbook with a fine source of pictures, especially their coverage of athletic events. Also, to Mr. Tony Darnell and his brother, Mr. Jerry Darnell, for their fine work. Tony, for his considerable amount of photography that appears on nearly every page of the book, and to Jerry for his fine art work, especially on the inside covers. Next, to Col. Mex Boyd and all the members of his fine staff in the Office of Information Services. Also, we owe special thanks to Maj. John Galt and Capt. George Rule, our OIC's, for all their help and assistance. And finally our thanks to Loren Reed and his staff at Newsfoto for their patience and valuable assistance in the completion and publication of FINAL APPROACH.

COMMUNICATE ON

CHANNELS

WITH ARC'S TYPE 210 TRANSCEIVER

The rapidly increasing volume of air traffic and the need for more precise traffic control has necessitated a tremendous increase in the number of assigned radio frequencies to carry on the necessary air-ground communications.

Only a few years ago pilots could operate with 10 or 20 channels. Later frequencies were increased to 80 or 90. Plans now call for 360 frequencies—enough to meet the need for years to come. In view of this channel increase, ARC now offers an all-channel, flight proven transmitter-receiver (Type 210 Transceiver) covering all 360

channels. The powerful 15 watts guarantees optimum distance range and the knifelike selectivity assures freedom from adjacent channel interference. Provision has been made for the selective use of single or double channel simplex whereby transmissions are made on a frequency 6 megacycles higher than the receiver frequency. There is no wait between receiving and transmitting for re-channeling.

This is ARC's latest contribution to air safety. Ask your dealer for a quotation to include a single or dual installation, along with other units of ARC equipment listed below.

Meets the CAA'S TSO C-37 and C-38 Categories

DATA LINK

Preserver of Peace ...

Developed and produced by RCA for the U.S. Air Force, the Time Division Data Link system employs digital transmission to transfer control information between ground environments and airborne systems. The use of digital techniques of high-speed computers bring the concept of automation to the field of communications and guidance of airborne weapons systems.

Applications of the system are: *ground controlled intercept, missile guidance and control, return to base, enroute air traffic control, automatic landing systems, tactical support.* This new development is compatible with NATO Data Transmission Specifications, and is of important significance both to military and civilian flying.

CAMDEN, N. J.

1942 First effective radar countermeasure was "Window," code name for thin strips of metal foil which reflected spurious radar echoes when dropped from Allied bombers, confusing enemy radar operator.

1943 Next came "Carpet," designation for techniques of radiating "noise" or static from bomber-borne transmitters, each tuned to slightly different frequency. Torrent of "noise" produced "rippling grass" pattern on enemy radarscope.

1944 "Tuba" was a tremendously powerful (50,000 watts) jamming transmitter located in England. Its potent signal blinded German night fighters' radar as they pursued RAF formations toward the island.

THE STORY BEHIND THE STORY

COUNTER-MEASURES

U. S. MAKES PROGRESS IN DECEIVING AN ENEMY

TODAY Shown below is only one of the techniques used in Sperry's integrated countermeasures system. U. S. bomber sweeping inland toward target nears anti-aircraft missile installation. Normally, bomber appears as blip on ground radarscope (1). But new Sperry jammer would transmit countersignal on same frequency as enemy radar, completely obscuring echo of signal on ground radarscope (2). This would make it impossible for enemy to tell number, location, or direction of U. S. planes.

Protecting our strategic bombers from detection is a unique military problem. For example, if enemy radar detects our bombers they cannot accomplish their mission. The problem then is to make the enemy's radar ineffective. Jamming techniques employed in World War II were effective in varying degrees but are inadequate today.

Now Sperry can report a notable break-through in this little-publicized area of electronics, achieved in cooperation with USAF's Air Research and Development Command. An integrated countermeasures system will equip SAC's Boeing B-52s with "a bag of tricks" which not only jams radars but also deceives missiles. This versatile system promises to provide a new measure of protection for our superbombers and will considerably enhance their offensive effectiveness.

...Dependable Aircraft Power

Continental Motors and its CAE subsidiary are successfully meeting a wide variety of aircraft power requirements. Dependable Continental engines of piston or turbine type now power not only leading makes of fixed wing utility and trainer aircraft, but modern high-performance helicopters as well. Engine-building experience dating from 1902 clinches the "rightness" of the engine with the Continental name.

NORTHROP T-38: SUPERSONIC CLASSROOM FOR THE NEW GENERATION OF U.S. PILOTS AND SPACEMEN!

The soon-to-fly U.S. Air Force T-38 is the first of a new family of manned aircraft Northrop-designed for tomorrow's free world defense. It typifies the Northrop goal of "dollar-engineering" for effective defense at low cost.

The supersonic T-38 trainer and the USAF Snark SM-62, free world's only intercontinental guided missile, are but two of many projects current at Northrop. Others include programs for ballistic recovery of man in orbit; advanced drones and missiles from Northrop's Radioplane Division; and years-ahead automatic guidance systems (both intercontinental and interplanetary) from the Nortronics Division of Northrop Aircraft, Inc. Our goal: a continuing contribution to effective free world defense at minimum cost to the taxpayer.

Record year for the Voodoo

Since May 1957 when it first began operational duty with the United States Air Force, the McDonnell Voodoo has been shattering records at a remarkable pace.

Among the most noteworthy achievements were:

New world speed record of 1,207 m.p.h. by an F-101A Voodoo—Dec. 12, 1957

Three transcontinental speed records broken by a flight of RF-101 Voodoos—Nov. 27, 1957.

New speed record from Japan to Hawaii—6 hours, 3 minutes. Made by a RF-101 Voodoo from Shaw A. F. Base, S. C.

A 5,600 mile, 11-hour non-stop flight by F-101C Voodoos at Bergstrom A. F. Base—May 1958.

Non-stop trans-Atlantic hop from Washington to Belgium—6 hours, 12 minutes—by RF-101 Voodoos—June 28, 1958.

These accomplishments are more than mere statistics—they are dramatic proof of the exceptional speed, stamina and safety that the McDonnell team has added to an awesome combat potential.

Civilian friends of the Armed Forces with Engineering Training are invited to investigate opportunities with the McDonnell team.

BULLETIN FROM **BOEING**

FLYING MISSILE LAUNCHER. Longest-range jet in the world, the advanced Boeing B-52 will carry two supersonic air-to-ground missiles in addition to its regular bomb load. It will give the Strategic Air Command's defense forces the combined advantages of accurate long-range guidance, mission recallability and supersonic weapons delivery. The new B-52 global jet bomber will, on a single retaliatory mission, be able to destroy several targets thousands of miles apart.

PILOTLESS SKY FIGHTER. Supersonic Boeing Bomarc defense missile is designed to seek out and destroy enemy bombers and air-breathing missiles long before they reach vital targets. Advanced Bomarcs will have a range of more than 400 miles.

SPACE AGE RESEARCH. Research at Boeing is pushing back the frontiers of scientific knowledge. Projects include studies of orbital glide vehicles, celestial mechanics, space trajectories, and drag and heating effects in high speed space flight and re-entry. Solid state physics and propulsion forces of the future are among programs directed by the Boeing Scientific Research Laboratories.

LONG-DISTANCE CHAMPION. The Boeing KC-135 jet transport-tanker has set a series of new records, including a nonstop, 10,228-mile flight from Tokyo to the Azores, longest jet flight ever without refueling. On this flight, time between Tokyo and Washington, D. C. was 13 hours, 35 minutes, cutting 18 hours off the old mark. In addition, these swift, swept-wing Boeing jets are establishing new records for minimum maintenance and maximum reliability.

Guidance in the Space Age

The guidance systems of today's missiles are the navigational equipment for tomorrow's space vehicles. **ARMA**'s inertial guidance system for Titan, newest and most sophisticated intercontinental ballistic missile, embodies all the principles needed to steer a space vehicle, manned or unmanned, to the moon or out to the planets beyond.

ARMA, in fact, has perfected a whole family of electronic, electromechanical and hydraulic systems of utmost precision and ingenuity for guidance, navigation, fire control, penetration and automation.

Ford Instrument Co. Engineer checks air-bearing gyro for angular drift on equatorial test stand. Test can show up drift rates as low as one revolution in 40 years. Tests like this . . .

help put U. S. missiles "on target"

Some of Ford Instrument's current or recent programs include:

- Inertial guidance systems . . . including Redstone and Jupiter
- Missile launching and control order computers
- Navigational and mission control systems and computers
- Analog and digital computer systems
- Fuzing, arming and other warhead control equipment
- Plotting equipment
- Nuclear systems and controls
- Gunfire controls
- Drone controls

The hour hand on your watch moves nearly 30,000 times faster than the slowest drifts Ford Instrument Co. scientists can measure with this side-real gyro test stand. It's part of the superbly equipped gyro facilities at Ford Instrument.

It's typical, too, of the advanced research and development facilities available at Ford Instrument Co. They're used to create and produce

the incredibly accurate control systems called for by modern technology in both government and industry.

And Ford Instrument's large-scale precision manufacturing facilities can turn even the most critical system requirements into working "hardware" on a quantity-production basis. Since 1915 Ford Instrument has been a prime supplier of weapon controls for our armed forces.

Key factors in any weapon system

It takes more than a runway or a launching pad to get the new aircraft and missiles into the blue.

The requirement for outstanding Air Force personnel is greater now than ever before, and promises to be even more demanding in the years to come.

That's why the new Air Force Academy at Colorado Springs has such significance. Here, resourceful young men will be readied for the big jobs of the future. They will acquire that high degree of technical and executive skill which will allow them to handle tomorrow's problems relating to aircraft, missiles or space vehicles with competence and efficiency.

Douglas salutes the foresight of Air Force planners in setting up this fine facility. As an Air Force partner in the nation's security with such projects as THOR, C-133, RB-66 and GENIE, we assume responsibility for our products throughout their operational life. And we realize that their success depends largely on the capability of the personnel who utilize them. We send our best wishes to the men who teach and the men who learn at the new Air Force Academy.

The Armed Services' Partner in Defense

NAA is at work in the fields of the future

MAN IN SPACE

Getting him there—in full control of his unique mental and physical faculties—is the toughest task military and industrial scientists have ever faced.

It calls for a continuous technological advance in three vital fields: rocket engines, automatic controls, and spacecraft structures.

North American Aviation is in the mainstream of this work. NAA's X-15 rocket ship is now being readied for its first flight into space.

The Rocketdyne Division builds most of America's large missile engines . . . power plants easily capable of thrusting a heavy payload into orbit. And the Autonetics Division produces in quantity the incredibly complex, completely reliable control systems that make space flight possible.

This year—American Airlines will introduce the first jet airliner in scheduled domestic service

The coming of the jets has been rightly heralded as the most significant development in air transportation since Kitty Hawk. Never before has the introduction of new aircraft so dramatically advanced the capabilities of commercial aviation.

Equally impressive is the contribution these splendid new airplanes will make to the total airpower of this nation.

The long range commercial type airliner has become a vital factor in modern warfare with its great stress on the swift movement of men and materiel. To be sure of logistic air support equal to the demands of a national emergency, the

Air Force and the airlines have organized the Civil Reserve Air Fleet. The new Boeing 707, with almost twice the performance of today's best piston-driven aircraft, will greatly augment the speed, range and capacity of this important reserve wing.

With hundreds of new aircraft ordered by the scheduled airlines, the combat power of the United States Air Force—today so gloriously symbolized by the Air Force Academy—will have the support of the largest and finest fleet of jet and turbo-prop transports in the entire world.

 **AMERICAN AIRLINES**
America's Leading Airline

Henri Bergson...on making gods

Humanity is groaning, half-crushed under the weight of the progress it has made. Men do not sufficiently realize that their future depends on themselves. They must first decide whether they wish to continue to live. They must then ask

whether they want merely to live, or to make the further effort necessary to fulfill, even on our unmanageable planet, the essential function of the universe, which is a machine for making gods.

Les deux sources de la morale et de la religion, 1932

A CONCEPT OF SCIENCE

Five years ago, The Martin Company conceived a unique undertaking in the field of pure science which grew out of a belief that our own and our country's resources in creative scientific research must be greatly enlarged and cultivated.

We believed that the country—and the Company—that concentrates on short-range material achievements, without a deep concern for the creative source of tomorrow's even greater achievements, will have no tomorrow.

It is now three years since that belief motivated management's action with the foundation of a program in pure research. Known as the Research Institute of Advanced Study, RIAS is now a substantial organization staffed by scientists who are working in many fields, including theoretical physics, biochemistry, metallurgy and mathematics, without short-range applied research requirements.

Today, the increasing appeals to industry and the nation for accelerated activities in basic research give the RIAS story a special significance. For creative research in pure science is the true life source of our technological security—the "seed bed" from which our national strength shall continue to grow.
